

SESSION VIII

Interactive Forum

Chair: Ding Day

Following an outstanding tradition, the 1997 Conference will host an Interactive Forum. We had a very successful Interactive Forum session at San Diego last year. We will continue this special feature to foster further discussions of new results in GaAs manufacturing technology and the direct exchange of information between the conference authors and attendees.

The Interactive Forum is held on Wednesday afternoon when no other technical sessions are scheduled. All authors of orally presented papers are present with descriptive material to provide further explanation of and additional information on their results. At the same time a number of papers not scheduled for the formal conference sessions due to time constraints are presented in poster form. This session should give all conference attendees a chance to learn what's going on in their area of interest, be that materials, devices, processing, manufacturing, reliability or test.
