

SESSION VIII

Interactive Forum

Chair: Douglas Martel, QualComm

A key objective of the GaAs MANTECH Conference is to promote information exchange and cooperation, with the expectation that it will make the GaAs industry, as a whole, more competitive. Following a tradition started in 1994, the Interactive Forum offers an informal environment for discussion and debate of the outstanding manufacturing practices and technology shared during the regular program. This popular forum, which distinguishes MANTECH, provides an opportunity for authors and attendees to further explore the details of the oral presentations, as well as other exceptional papers. The Forum is composed of two sessions. Authors from the first five regular program sessions will be available for the first hour, and authors from the remaining sessions will be available for the second hour. Authors of interactive only papers will be available throughout the Forum. The 1998 GaAs MANTECH Conference invites you to enjoy the refreshments, and take our distinguished authors to task.
